

Maruku translates HTML entities to the equivalent in \LaTeX :

| Entity | Result |
|---------------------------|-----------|
| <code>&copy;</code> | © |
| <code>&pound;</code> | £ |
| <code>a&nbsp;b</code> | a b |
| <code>&lambda;</code> | λ |
| <code>&mdash;</code> | — |

Entity-substitution does not happen in code blocks or inline code.
The following should not be translated:

`©`

It should read just like this: `©` .
